Response to Amendment

The following is in response to the amendment filed on June 21, 2007.

Allowable Subject Matter

Claims 5-9 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or suggest a system for refining lignocellulose raw materials including a digester, a refiner, and a connection device between the digester and the refiner, wherein a dewatering device is provided in the connection device, the dewatering device comprising a plug screw that separates raw material and condensate, a discharge pipe for discharging condensate, and a rotating peeling head at the discharge end of the plug screw. Prior art devices for discharging lignocellulose raw materials from a digester to a refiner may comprise a discharge screw, but do not contain at least the above combination of features of a plug screw, discharge pipe, and rotating peeling head. It is understood that all pipes, ducts, and devices connecting the digester and the refiner are considered a "connection device".

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments filed June 21, 2007 have been fully considered.

In view of the arguments, the rejection under 35 U.S.C. 103(a) over Lindahl (4,599,138) in view of Miller, Jr. et al (US 3,841,465) or Svensson et al (US 4,274,786). Upon reconsideration, it is recognized that Lindahl teaches a system for pretreatment and compression of wood chips prior to cooking a digester. The screw feeder therein is in connection with the pretreatment system.

The amendment to claim 5 overcomes the objection set forth previously.
